

PROTECTOR 900 Automatic

- No more chemical products and traps
- Perfectly safe for people

TECHNICAL DATA

- Dimensions : 200 x 245 x 105 mm
- Weight : 380 gr
- Power supply : 220 Volt - 50 Hz (110 Volt - 60 Hz on demand)
- Power : 3W
- Opening angle of emission cone : 160°
- Sound pressure : 130 db \pm 10%

Indispensable for Houses - Schools
Restaurants - Kitchens
Pubs - Cafes - Canteens
Shopping Malls - Hospitals ...

- **REVOLUTIONARY • ECOLOGICAL • SAFE •**
- **FIRST IN THE WORLD •**
- **PATENTED IN 1986 •**

- *Flying insect exterminators*
- *Sticky paper insect traps*
- *Ultrasonic pest repellers*

- No interferences to television, radios, gas detectors and other electronic apparati
- No toxic chemicals
- No danger or troubles for humans and domestic animals

- We recommend leaving the device constantly switched ON
- Minimal energy consumption (about 1 kW every 10 days)
- Keep away from water

100 % MADE IN ITALY

PROTECTOR 900 Automatic

Protector 900 is an ultrasonic device effective to keep away mice, rats, ants, ...
Laboratory tests and practical results have demonstrated that ultrasonic sound waves emitted by this device at a potency of 130 decibels of pressure attack nervous and auditory systems of most of the harmful insects and rodents.
Pain and discomfort caused by sound waves forces undesirable animals and insects to vacate the area. It should be understood that, at first, rodents and insects will try to resist the sound waves before giving up "their territory".
However within four or five weeks they will have left the area once for all.

Protector 900 is specifically designed to prevent pest presence in commercial areas which respect hygiene standards and HACCP regulations.

INSTALLATION AND USE

Set the device on the ground and point it towards the direction of the surface you want to protect. Remember that the ultrasonic waves will bounce off obstacles in their path and will not pass through walls. To protect separate areas and rooms install several devices.

Effective area:
- 40 m² indoors

Once you have inserted the plug, a small RED LED light will come on to indicate that the machine is connected to the high voltage. Then a small GREEN LED light will come on, with an intermittance of 8-10 second, to indicate that the machine is working, emitting ultrasounds.
The frequency varies automatically from 20.000 to 60.000 Hz to prevent the rodents from developing immunity and getting used to the waves.

CE E.N.C. CLASSE II  

Compliant with health and safety standards pursuant to Italian Presidential Decree n.327 dated 26/03/1980 and subsequent amendments in terms of effectiveness hygiene and human safety.

ABOUT US

• Most of the insect exterminators currently available on the market create a series of problems caused by their high-voltage grid:

- risk of explosion in presence of gas
- unpleasant sounds and nasty smells
- build-up on the high voltage grid
- development of pathogenic germs on foodstuff caused by possible dropping of dead insects

TRAPPEN said STOP!

Thanks to the genial turbo-aspiration system and ultrasonic waves, our devices say goodbye to these problems, guaranteeing hygiene and healthy conditions.
