

TORNADO

- PROFESSIONAL DEVICE
- STAINLESS STEEL
- IP 44
- PERFECT IN ALL PLACES WITH HIGH DENSITY OF FLYING INSECTS

- Replace the lamps after 6000 hours with original spare parts
- Our devices can be fitted with 30W shatterproof lamps

TECHNICAL DATA

- Dimensions : 360 x 500 x 790 mm
- Weight : 14,00 Kg (optional pole 25,00 Kg)
- Power supply : 230 Volt - 50 Hz - 140W
- Actinic lamp power : 2 x 30W
- Professional motor IP44
- Air intake velocity : 0,7 m/s

Indispensable for Shopping Malls - Industries
Restaurants - Kitchens
Warehouses - Food Factories - Dairies
Gardens - Stables ...

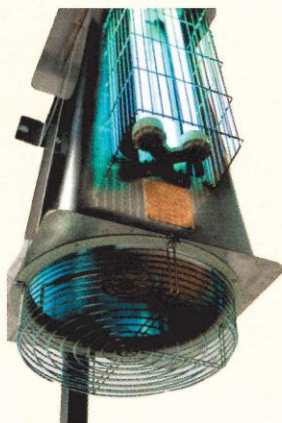

- REVOLUTIONARY • ECOLOGICAL • SAFE •
- FIRST IN THE WORLD •
- PATENTED IN 1986 •

- Flying insect exterminators
- Sticky paper insect traps
- Ultrasonic pest repellers

- We recommend leaving the device constantly switched ON
- Minimal energy consumption (about 1 kW every 24 hours)
- Stainless steel - rainproof IP44

100 % MADE IN ITALY

TORNADO

Tornado is provided with two special 30W actinic lamps which attract all flying insects (flies, mosquitos, wasps, gnats, moths, ...). An ingenious turbo-aspiration system sucks them in and it holds them into a removable and replaceable 20-litres bag, where the insects die through dehydration.

The bag can be removed and emptied at regular intervals.

Tornado is specifically designed to prevent pest presence in commercial areas which respect hygiene standards and HACCP regulations.

INSTALLATION AND USE

- **Tornado** can be wall-mounted with 4 plugs at a height of at least 2 metres, or it can be fixed to a special (optional) pole.
- Tornado can be used outdoors and is rainproof.
- Perfectly safe for people and animals.
- We recommend cleaning the wire grille on a regular basis to ensure correct aspiration.

Effective area:

- >300 square metres
- Attraction distance : 18 metres

CE

IP 44

Compliant with health and safety standards pursuant to Italian Presidential Decree n.327 dated 26/03/1980 and subsequent amendments in terms of effectiveness hygiene and human safety.

ABOUT US

- Most of the insect exterminators currently available on the market create a series of problems caused by their high-voltage grid:
- risk of explosion in presence of gas
- unpleasant sounds and nasty smells
- build-up on the high voltage grid
- development of pathogenic germs on foodstuff caused by possible dropping of dead insects

TRAPPEN said STOP!

Thanks to the genial turbo-aspiration system, our devices say goodbye to these problems, guaranteeing hygiene and healthy conditions.
